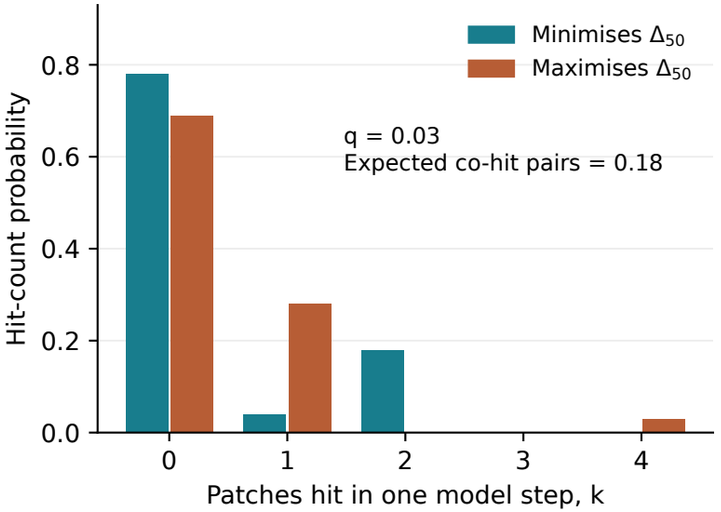
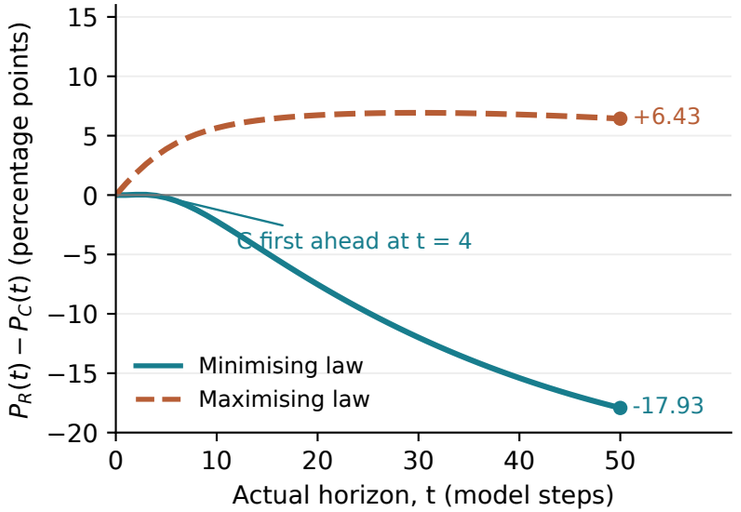
Preserving survivors and rebuilding occupancy respond differently to higher-order hits

Four certified E extremisers · n = 4, p = .10, e_0 = .02, e_1 = .90, c = .10 · initially all occupied

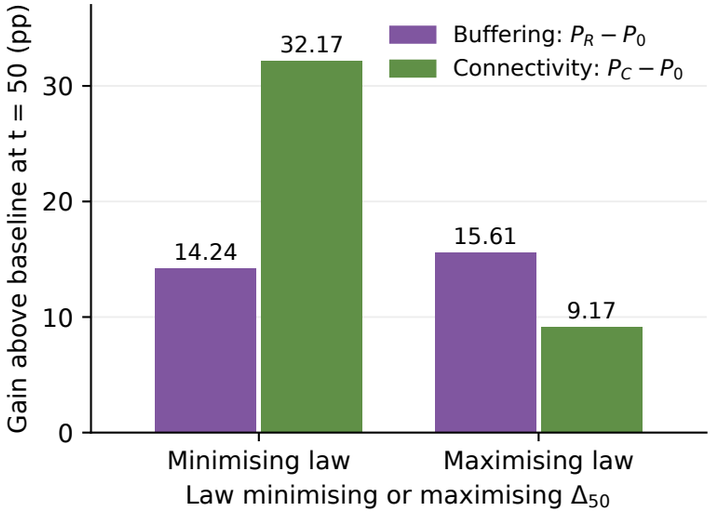
A Pairwise agreement permits different hit counts

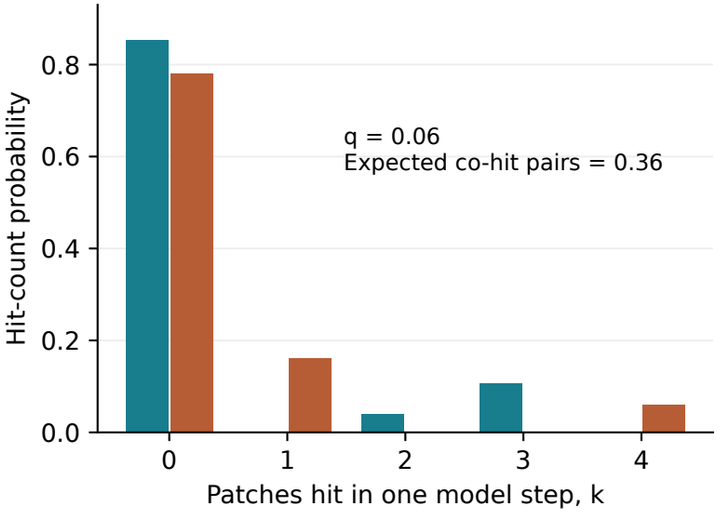


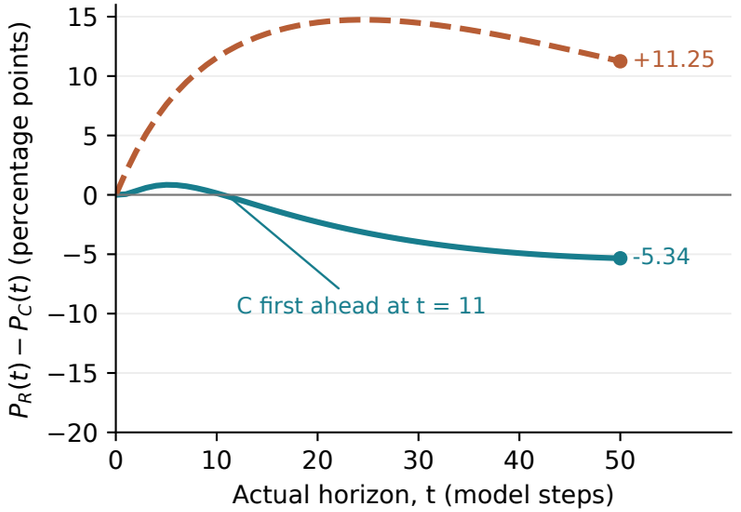
B The ranking changes along actual trajectories

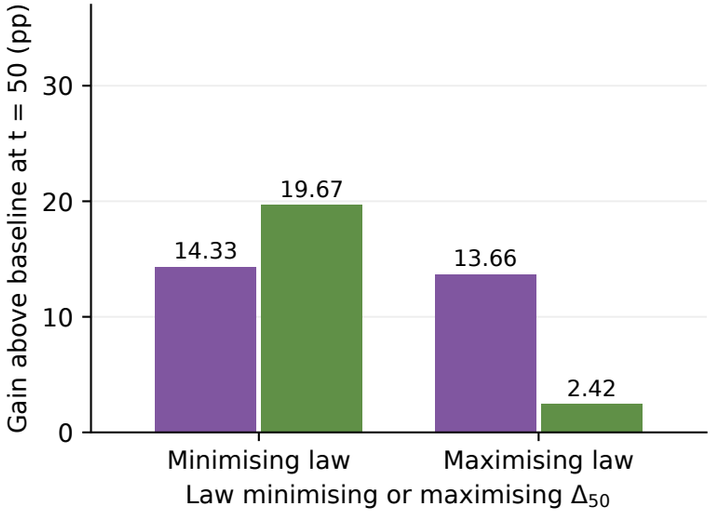


C Connectivity's benefit falls most









Within each row, both laws preserve all pairwise hit tables. A hit is an exposure, not necessarily a death.

B uses direct horizon calculations; C uses complete-action gains. Neither shows a prefix of the fixed-T telescoping allocation.
